Installation guide: OFM

OFM has provided detailed Installation and Operating Instructions for their Mussel Kits. A hard copy will also be included in the shipment with the data logger.

Be sure to contact Orange Force Marine with the date/time of the installation so they can be available to provide real-time / near real-time support.

During the installation you will be directed to fill out a metadata table for the vessel (see pages 7-10 of the Installation Instructions), which can be completed manually on the printed sheets and submitted electronically here.

When the installation is complete, contact Orange Force Marine to confirm that the logger is online and working properly.
